### **DETAILED ACTION**

#### **EXAMINER'S AMENDMENT**

1. The application has been amended as follows:

In claim 4, line 2, the number "32" has been deleted and the number --3-- inserted therefor.

#### ***Allowable Subject Matter***

2. Claims 1-4 are allowed.
3. The following is an examiner's statement of reasons for allowance: the references of record, either alone, or in combination, do not teach or suggest at least the limitations of: having a single clock pulse, delaying that clock pulse by a predetermined time, and inputting both pulses into a latch circuit to detect a decrease or increase in pulse width of the clock that is greater or smaller than the predetermined time and outputting that signal to a flip-flop circuit.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

#### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Rinaldi (4,399,412), Nishioka (JP 2002-026704), Nemetz et al. (5,923,191), Millar (6,087,868), Vartti et al. (5,422,918), and Wang et al. (5,663,665). These references teach using a clock pulse with a delay to determine phase differences, and two different clock pulses to determine pulse width using latches and flip-flops. However, no reference teaches using a single

clock pulse, with a delay to determine pulse width, and no motivation can be found to combine any of these references to make the proposed invention.
